

ASEM ABU ALRUB

Mobile Software Engineer | Android & Kotlin Multiplatform

Amman, Jordan | asem.m.abualrub@gmail.com | +962 780073856 | linkedin.com/in/asem-abu-alrub | [Portfolio Website](#) | github.com/AsemLab

SUMMARY

Experienced Mobile Developer with 4+ years of experience building and launching high-quality Android and cross-platform applications. Proficient in Kotlin, Kotlin Multiplatform (KMP), Compose Multiplatform, and Jetpack Compose, with strong expertise in clean and modular architecture. A fast learner and problem solver focused on building scalable, reliable, and high-performance mobile solutions.

EXPERIENCE

Aspire InfoTech | Intermediate Software Engineer – Mobile 05/2026 - present

Amman, Jordan

Consultant | Majid Al Futtaim (Mall of the Emirates Project)

- Architected and maintained **Kotlin Multiplatform (KMP)** mobile applications, sharing core business logic and functionality seamlessly across Android and iOS.
- Contributed to two reusable mobile libraries: a multiplatform **UI component library** for building consistent design systems and a **CMS rendering library** for dynamic cross-platform content delivery.
- Engineered the search feature for the **Mall of the Emirates** mobile application, enabling fast and intuitive in-mall store discovery for users.
- Integrated the Home Page SDK, empowering the application to dynamically deliver personalized homepage content and functionality.
- Collaborated with cross-functional and client-facing teams to deliver scalable mobile features while maintaining clean architecture and high code quality across the KMP codebase.

Revest, Kotlin Multiplatform (KMP) Developer 10/2025 - 05/2026

Amman, Jordan

- Maintained and enhanced a Kotlin Multiplatform (KMP) codebase using Compose Multiplatform shared across Android, iOS, and Desktop, improving code reuse and cross-platform consistency.
- Developed an offline-first shift management feature, ensuring reliable **POS** operations and data synchronization even with limited network connectivity.
- Integrated multiple payment gateways, including WalaaOne, enabling secure and seamless payment processing.
- Implemented loyalty points as a payment method, allowing customers to earn and redeem points during purchases.
- Led the UI revamp of the **Flex** delivery application, modernizing the interface and improving overall user experience.
- Implemented delivery validation mechanisms including OTP verification, customer signature capture, geofencing, and photo confirmation to ensure secure delivery completion.

Self-Employed, Freelance Android Developer 10/2023 - 10/2025

Amman, Jordan

- Designed and implemented custom app architectures tailored to client requirements, resulting in scalable and maintainable Android applications.
- Successfully delivered customized Android applications for clients in diverse industries, meeting tight deadlines.
- Integrated advanced analytics and crash reporting tools (e.g., Firebase Analytics, Crashlytics) into client apps, enabling data-driven improvements and reducing app crash rates.
- Migrated legacy apps to the latest Android standards, ensuring compatibility with modern devices and enhancing the app lifespan.
- Integrated advanced features such as real-time notifications, offline mode, and location-based services, enhancing app usability and meeting specific client requirements.

Proxify, Android Developer 11/2022 - 10/2023

Denmark, Remote

- Boosted the user base of the **eTilbudssavis** (Scandinavia's most downloaded deals app) by enhancing key features and optimizing UX through:
 - Refactoring legacy Java code to modern Android Kotlin using Jetpack libraries, resulting in improved code maintainability and performance.
 - Developing a local data sync engine to reduce server API requests, optimizing app performance and minimizing backend load.
 - Revamping the app's UI, resulting in a more intuitive user experience and increased user retention.

A.R.E.A, Android Developer 04/2022 - 01/2023

Amman, Jordan

- Contributed to the development of **Winin** game by:
 - Developing key features, including radio functionality and adding friends feature, to enhance gameplay and user engagement.
 - Working closely with the QA team to identify and resolve bugs and technical issues, ensuring a smooth and enjoyable user experience.
- Contributed to the development of **Bidkom** by:
 - Integrating social media login functionality with providers such as Google, Facebook, Instagram, and Twitter, streamlining the login process for improved user convenience.
 - Implementing essential features, including user items functionality, notifications, and settings, to provide a cohesive and engaging user experience.

SKILLS

- **Languages & Core:** Kotlin, Java, SQL
- **Mobile & Cross-Platform:** Android, Kotlin Multiplatform, Compose Multiplatform, Jetpack Compose.
- **Architecture & Patterns:** MVVM, MVI, Clean Architecture
- **Libraries & Networking:** Retrofit, Ktor, Coroutines, Flow, Hilt, Koin, Room, SQLDelight, DataStore, Paging3, Navigation Component
- **Backend & Cloud:** Firebase, Google Play Console, AdMob, Unity Ads
- **Testing & Tools:** JUnit, Mockito, MockK, Git, GitHub Actions, Jira, Figma

EDUCATION

Bachelor in Software Engineering 01/2018 - 02/2022

Jordan University of Science and Technology | **Irbid, Jordan**

PERSONAL PROJECTS

Dark Screen 02/2022 - Present [↗](#)

Android app that dims the screen and reduces brightness, available on the Play Store in free and pro versions with **35,000+ downloads**. Built with Kotlin, Hilt, Firebase, and Google Services like In-App Updates, In-App Reviews, and Google Ads.

Quakes 03/2023 - 12/2023 [↗](#)

Android app providing real-time global earthquake updates, available on the Play Store, developed using Google Maps SDK, Firebase, and a modern tech stack with Hilt, Coroutines, Flows, and Jetpack libraries like Room, ViewModel, and Paging3, all built on MVVM architecture.

Fluffy 03/2021 - 01/2022

Cat grooming app designed to simplify care tasks for pet owners, helping them track and monitor their cat's health. Built using Kotlin, with Room for local data storage, Firebase for cloud integration, and the Navigation Component for intuitive user flow.

Corona Tracker 03/2021 - 04/2021 [↗](#)

Android app delivering real-time global Covid-19 statistics, developed using Kotlin, with Retrofit for API integration, Hilt for dependency injection, and Coroutines for efficient asynchronous operations.

CERTIFICATIONS

Problem Solving (Basic) HackerRank 2024

Covers basic topics of Data Structures and Algorithms

SQL (Intermediate) HackerRank 2022

Covers complex joins, unions, and sub-queries

Android Development 2019

1 million Arab coders initiative, Android track
